Highlights and Conclusions

On an annual average basis between January 1990 and June 1993, Mississippi's monthly employment health, as measured by the unemployment rate, range from seven-tenths of a point to 1.9 percentage points above the national average. Periods with the lowest differential between state and national rates in 1992 were due to an increase in the national rate. For 1993, April and May saw a near convergence of rates between the state and nation (See Table 15).

The population of persons aged fourteen years and older for Planning Year 1994 is estimated to be 2,009,220. However, with the current period being four years removed from the 1990 Census, various assumptions about the placement and distribution of the ethnic groups had to be made (See Table 1). These assumptions may have caused over or underestimating of one or more of the various ethnic groups. Nevertheless, the overall population trends are considered accurate, indicating a decreasing rural population and an increasing urban one.

Over the past two years Mississippi's monthly civilian labor force has consistently remained at or below the 1.2 million person participation mark, with July being the peak month each year. Otherwise, only during the month of December, 1991, did labor force participation grow above 1.2 million people (See Table 15). One reason for the summer months' increase was school recess, which puts numerous students into the job market. During this annual occurrence, the level of employment generally does not increase as rapidly as the level of unemployment. It is this combination of events that causes summer unemployment rates to climb on a regular basis. In addition, planning year forecasts in Table 20 indicate a probable nine-tenths of

a percent labor force growth rate from the 1992 Planning Year through Planning Year 1994. In like manner, the number of existing establishment based jobs is expected to increase by 1.52 percent for the same period. Furthermore, the increase in nonmanufacturing jobs is expected to outperform manufacturing jobs between the same two years (See Table 20).

Leading the occupational categories for net growth between 1991 and the year 2005 are Professional, Paraprofessional, and Technical fields. The same fields are also expected to lead other major occupational divisions in percent growth. The group with the lowest expected job growth in both percentage and net performance terms are the Agriculture, Forestry, Fishing, and related occupations. Overall, the state can expect a 16.2 percent growth in jobs between 1991 and the year 2005.

The majority of persons receiving UI benefits during PY 1992 were either male or nonwhite, and most often fell between the ages of 25 and 34. Of the total 70,360 claimants in that age group, 53 percent were male and 56 percent were nonwhite. However, these groups are not mutually exclusive because each observation is counted twice, once for gender and again for race(Table 16). During PY 1992 the largest proportion of claimants were due to short term mass layoffs, mostly caused by seasonal business cycles. Also, the relocation of firms from the continental United States to Mexico or other foriegn lands could continue to be a growing factor in the numbers receiving unemployment compensation. The North American Free Trade Agreement (NAFTA) is worth paying attention to when monitoring future U.S. unemployment.

Total unfilled job openings were at their peak during the first and third quarters of PY 1992. Similarly, job openings received and filled showed the greatest increase between the third and fourth quarters of PY 1992. Job openings received and filled increased 52.6 and 50.1 percent, respectively, for the referenced period. The primary occupations of PY 1992 job applicants were Clerical and Sales and Bench Work. The smallest occupational group of applicants was Processing. Minorities made up the largest proportion of the Processing applicants and had the smallest portion of Professional, Technical, and Managerial occupations.

An anticipated increase in the state's labor force for PY 1992 will be reflected in the number of the unemployed at times and employed at other times. The overall labor force participation for males is projected to decrease in PY 1994 from PY 1993. For the major race groups, the largest labor force participation rates in PY 1994 should be among white men, while the lowest participation rates should be for African-American women. African-American men are likely to be 13.6 percentage points below that of white males as to participation rate. White women are expected to be 3.2 percentage points above that of African-American women (See Table 5). The unemployment rate for Vietnam-Era veterans should remain lower than that for the general population. This phenomenon is aided by various special employment considerations received by veterans from many employers. Another advantage is their age and maturity.

With the current industry restructuring process and the North American Free Trade pact looming on the horizon, there could be an increase in those turning to the government for training or retraining, as manufacturing firms seek out less expensive labor markets.

People seeking job assistance may well turn to programs such as JTPA and other job assistance programs administered by the government.

The total number of disadvantaged individuals in Mississippi for PY 1994 is projected to be 746,370, an 8.65 percent decrease from PY 1993. This large decrease can be attributed to the availability of new poverty data. Of the disadvantaged in the state, 64.6 percent will be minority with the remainder being white. Economically disadvantaged persons above 65 years of age should total to about 135,750, of which 57.5 percent will be white (Table 26). Also, 56.4 percent of the female family heads in the labor force will have incomes below the poverty level. This is in contrast to the 22.0 percent of males in the labor force expected to be below the poverty level. At the same time. 70.8 percent of minority women in the labor force will likely exist below the poverty level, while their white counterparts show only 32.9 percent living on substandard income (Table 31). The disadvantaged population in Mississippi should not shrink by any significant number in the near or intermediate future. Solutions to address this problem would require a large scale government or private initiative because of the complex issues that have contributed to widespread poverty in Mississippi. Issues such as education, lack of entrepreneurship and corresponding capital needs, and family influences would take the forefront in addressing the current social and economic situation.

During Planning Year 1994, there will be an estimated 271,380 different persons unemployed at some point in time. Those between the ages of 25 and 34 will contribute the greatest numbers to the unemployed. Those aged 65 and over will contribute the least. Also, the

number of different individuals unemployed for PY 1994 is expected to show a 6.4 percent decrease from PY 1993(Table 10).

Mississippi's population changes from 1984 to 1994 show the number of persons will have increased by 1.81 percent (Table 38). The largest percentage growth among the 82 counties from 1984 to 1994 should occur in Hancock County. On the other hand, Issaquena will likely experience the greatest decline in population, minus 26.4 percent, from 1984 to 1994 (Table 38). Jefferson County, according to the 1990 Census, housed the highest percentage of minority population in Mississippi, an 86.3 percent quantity. Conversely, Tishomingo County reported only a 3.8 percent minority population. The state as a whole showed 36.5 percent minority population.

The state's economic condition has fared rather poorly since the end of World War II in relation to other states in the south. Consequently, the state's social conditions have been in the same dire straits even longer. Causes for low per capita income can be tied to the high unemployment in the western counties and to competition from other states for semi-skilled and unskilled manufacturing labor. In addition, lack of adequate educational oppurtunities, the high ratio of transfer payments to total personal income, and continued divisions along racial lines are likely to help the state remain last in regard to almost every socioeconomic measure. Businesses might be reluctant to invest large amounts of capital where conflict is possible. However, the advent of the gambling industry has yielded some pleasant suprises with new jobs in depressed river and coastal counties.

Historically, unemployment rates for the state have consistently been higher than those of the nation. However, when each county's rate is viewed independently, we find there to be two distinct ranges

of unemployment rate groups. On a regular basis, over half of all counties in Mississippi suffer from chronic unemployment and excessively high rates of 10.0 percent or higher, with some area's rates being as high as 20.0 percent. Contrastingly, rates in the eastern group of counties are sometimes as low as 3.0 percent in a given month. To sum up, Mississippi has two distinct and diverse types of economic environments, one where employment opportunities are plentiful, and one where hope for legitimate employment is all but gone.

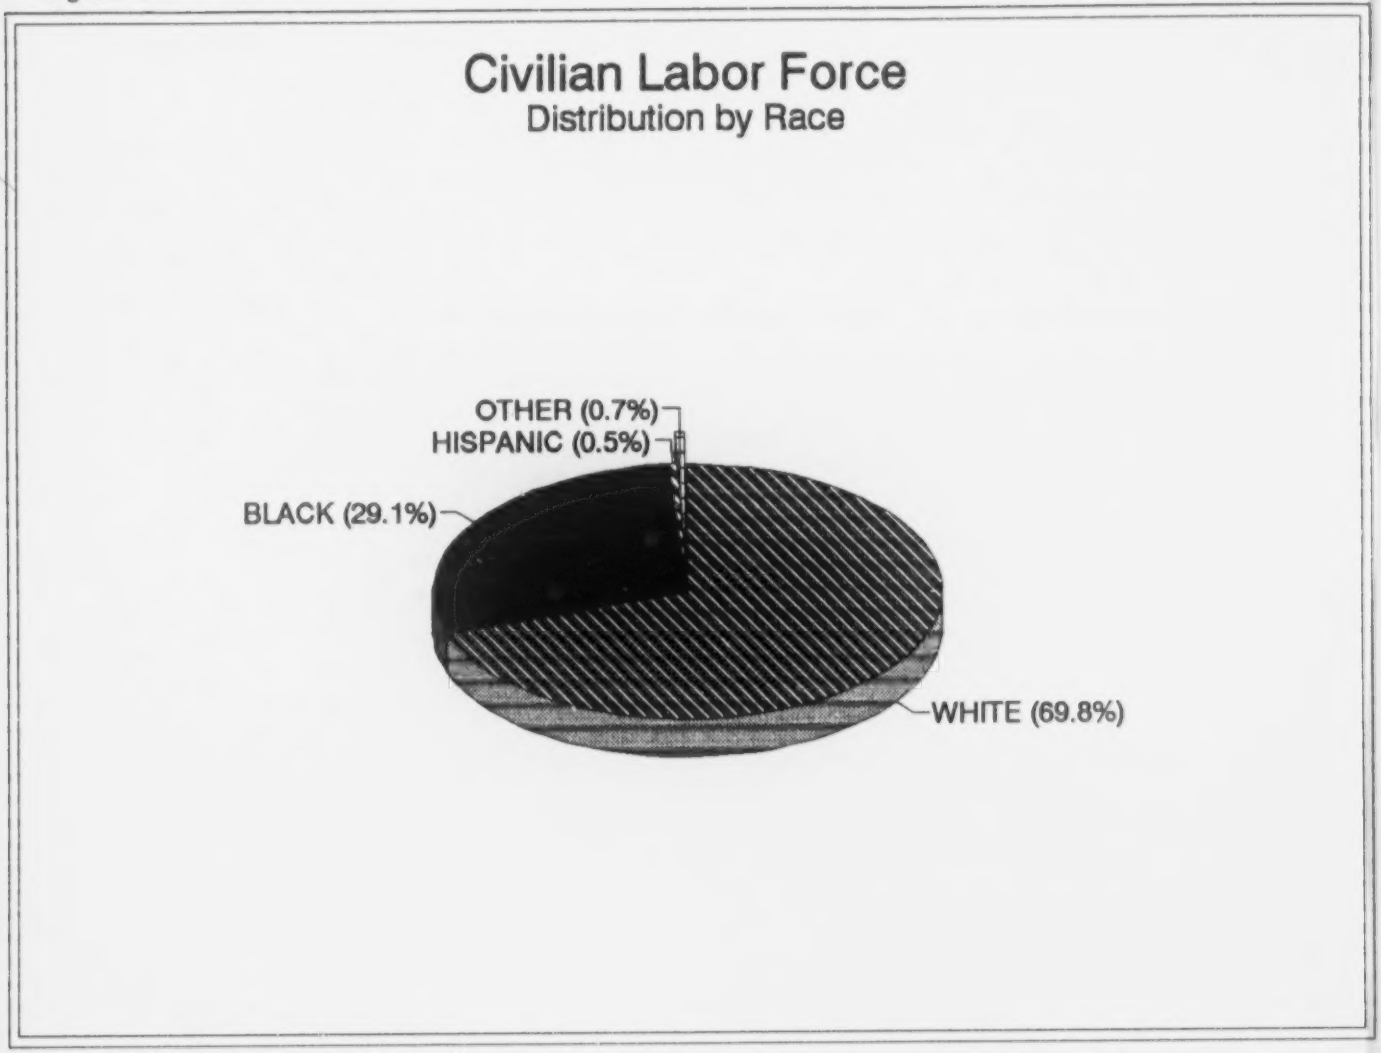
Also, if free international trade takes root over the nation, the demand for United States labor could diminish, thus creating even higher levels of unemployment in many areas of manufacturing. Small domestic business establishments could soon become the only local source of generating new wealth, should any significant number of national or multinational firms elect to relocate production facilities outside the nation's borders.

Definition of Area

The State of Mississippi is composed of 82 counties, situated between the Gulf of Mexico on the south and the State of Tennessee on the northern border, and lying westward from the state of Alabama to the Mississippi River. Jackson, the capital, is the largest city, with a 1990 census population estimated at 196,637. The Gulf Coast metropolitan area is the only other contiguous area with a population over 150,000 people. A majority of the state's total population is found from Jackson southward to the Gulf Coast. The northern areas of the state are mostly rural and, with some notable exceptions, remain largely agricutural. Mississippi's total population was 2,573,216 according to the 1990 Census. The noninstitutional population aged 14 and above is projected to number 2,009,220 during PY 1994.

The State of Mississippi has five Service Delivery Areas within its borders: the Hinds SDA, the Gulf Coast SDA, Three Rivers SDA, the Central Mississippi SDA, and the Mississippi SDA, which is comprised of the remaining counties.

Figure 1



For detailed data, see Table 4.

Population and Labor Force Characteristics

Mississippi's noninstitutional population, 14 years of age and older, is estimated to be 2,009,220 individuals in PY 1994. Minority races will make up approximately 34.0 percent and whites will sum to 66.0 percent.

The increasing trend in the Mississippi labor force is expected to continue through PY 1994. Projections indicate that 1,200,000 individuals will make up the average monthly civilian labor force during PY 1994. Currently, the civilian labor force is about 44.3 percent female. This number may increase if the nation slides into an economic recession. Many might be required to provide their families with an additional wage earner in such a case. Consequently, in PY 1994, the male labor force participation rate should be 24.3 points greater than that for females. Projections also indicate that, despite the increase in the number of persons participating in the labor force in PY 1994, most of the new participants will be able to find some kind of work as long as the economy does not lapse into recession.

Improvements in the educational level of Mississippians continue at a slow, but steady, pace. A majority of the populace above the age of 16 will possess at least a high school education by PY 1994. Of those with 16 or more years of education, 910 will be less than 22 years of age. Also during PY 1994, a greater percentage of females will obtain up to 15 years of education than males, but more males will obtain 16 or more years of education than females (Table 3).

Characteristics and Number of Unemployed

In PY 1994, projections indicate that an average of 88,700 workers will be unemployed during a given month. There will also be about 271,380 different individuals counted in this number at some time during the year. People aged 25-34 will have the largest total of any single grouping. The long-term unemployed are projected to be composed of about 58.5 pecent males and 41.5 percent females. In a reversal of previous trends, partially due to their increase in age, Mississippi's Vietnam Era veterans should experience fewer employment problems than nonveterans of the same race.

The experienced unemployed in PY 1994 should average about 80,100 workers. Males will slightly exceed females, with white males and nonwhite females having the highest single total of experienced unemployed. Projections also indicate that among labor force participants, some 107,020 will be employed for 13 weeks or less during the coming year. Slightly over half of this number will be female.

Unemployment is still a widespread reality in Mississippi and will continue to be so in PY 1994. Although the situation has been improving during recent years, there are still many workers seeking solutions to their problems of chronic unemployment.

Trends in Unemployment

Even though Mississippi's employing establishments are very much affected by national economic conditions, the unemployment rate has not always followed the same trend as the national rate. In 1984, the state rate was 3.3 points above the national level. Through 1988 rates remained approximately three points apart. Since then, Mississippi's rate has declined more rapidly, closing the gap nearly to the point of convergence. Much of the increase in the number of unemployed can be attributed to natural growth in Mississippi's civilian labor force. The establishment of new industry, especially Gaming, has contributed in some local areas to the lessening of unemployment and to an increase in job opportunities. On the other hand, some local gains in joblessness can be traced to plant closings and subsequent relocation to foreign countries. The loss of these jobs has been severely detrimental, especially to some rural areas. The state's policy makers have made some strides towards creating and expanding new business and industries in recent years. However, recovery has not been universal and there remain many areas of despair and high joblessness. Continued slow statewide recovery is anticipated, although certain areas can expect to suffer abnormally high rates of unemployment, just as they have over the past decades. Mississippi's policy makers can help Gaming and other industries by closely monitoring related legislation, both here and in neighboring states, and by taking appropriate action.

Characteristics of the Insured Unemployed

The number of unemployment insurance claimants varied considerably throughout PY 1992. Males drawing unemployment compensation outnumbered females in three of the four quarters. The largest portion of the UI claimants were from the 25-34 age group, while in all four quarters nonwhite totals were slightly higher than that for whites.

Occupational distributions of the unemployed varied only slightly from quarter to quarter in PY 1992. Clerical and Sales occupations contributed most to the number of UI claimants in all quarters, followed very closely by Bench Work and Structural Work. Males were most often categorized in Structural Work and Machine Trades, while females most frequently came from Clerical and Sales and Bench Work occupations.

The duration of unemployment among the majority of insured jobless throughout the year was moderate, averaging five to fourteen weeks. Males and whites in nonmutually exclusive groups suffered more long-term unemployment than did females or nonwhites (Table 18).

Variations were also noted in the dispersal of UI claimants according to industry of last employment. Services and Trade were the most common industries of last employment for claimants during the entire year. Construction and Apparel also had sizable counts throughout the 1992 planning year. The greatest numbers of unemployed among manufacturing groups were found in Apparel, Furniture and Fixtures, and Electrical Machinery.

Employment Developments and Outlook by Industry

Total residence based employment in Mississippi grew at a nominal rate from PY 1988, when the number stood at 1,055,300 workers, to the PY 1992 estimate of 1,102,000. Employment counted by place of work followed a similar trend. For the same reference period, growth in manufacturing jobs was not as great as that in nonmanufacturing. Overall, manufacturing employment appears to be growing most in nondurables as opposed to durable goods. More manufacturing jobs would be helpful and are needed, but too many of the jobs in the expanding groups pay lower than average wages. Growth in some areas, such as Trade and Services, is somewhat dependent upon the economic condition of other industries. The Service and Miscellaneous sector is projected to show the largest increase in jobs between PY 1993 and PY 1994, with 6,600 new positions projected. Industrial groups that declined decisively from 1988 to 1992 included Stone, Clay, and Glass, Primary and Fabricated Metals, Apparel and Textiles, Electrical Machinery, and Mining.

Unexpected events that could occur due to political upheaval, fuel shortages, labor disputes, or natural disasters could also affect employment and severely limit growth and expansion throughout the state. The state of Mississippi's economy will also depend, to a large degree, on national conditions and their net effect on local industry.

** projected data

Employment Developments and Outlook by Occupation

Projected employment in the state of Mississippi is expected to total 1,199,580 jobs by the year 2005. This figure includes openings due to both expansions and to replacement of workers who die or retire.

The employment sector anticipated to require the largest number of new workers by 2005 is Services. There is also expected to be a sizable demand for workers in the Trade sector. Mining jobs will be one of the least in demand. Of the total employment sector growth, manufacturing is only expected to increase by 10.1 percent, less than most of the nonmanufacturing sector's growth rate.

Employment Service Unfilled Job Openings

During PY 1992, the offices of the Mississippi State Employment Service received orders for 258,780 job openings. By the end of the year some seventy percent of these openings had been filled. The total number of unfilled job openings was highest during the first quarter of PY 1992. Overall, 68.1 percent of these jobs remained unfilled for 30 days or more.

In the coming year, little problem is anticipated in filling most industrial jobs. Some shortages may occur in those jobs with high skill levels in the rural areas, but few shortages are anticipated statewide. With approximately two fifths of the minority and female applicants available in PY 1992 having little or no experience, jobs at entry level will be very competitive. Some problems may occur in meeting requirements as set forth by employers, but this is expected more at higher levels of employment, where experience and know-how are basic requirements.

Many of the job applicants during PY 1992 were either out of work for a short period of time, dislocated, or were employed and looking for an occupational change. Many jobs which were made available to these workers were either low-paying or possessed unsuitable working conditions. Distance from work is still a problem in the rural areas of Mississippi where a large number of the less mobile population lives. Ability to meet local employer's job specifications and availability of transportation to and from work will be obstacles which many must overcome.

In order to successfully meet the demands of the 1990's, education and knowledge of locally available job possibilities must be

given top priority. The day when a worker could enter an employer's office and immediately find a job is no longer with us. More and better training opportunities should no longer be considered as something that will benefit the local economy, but should be viewed as necessary maintenance.

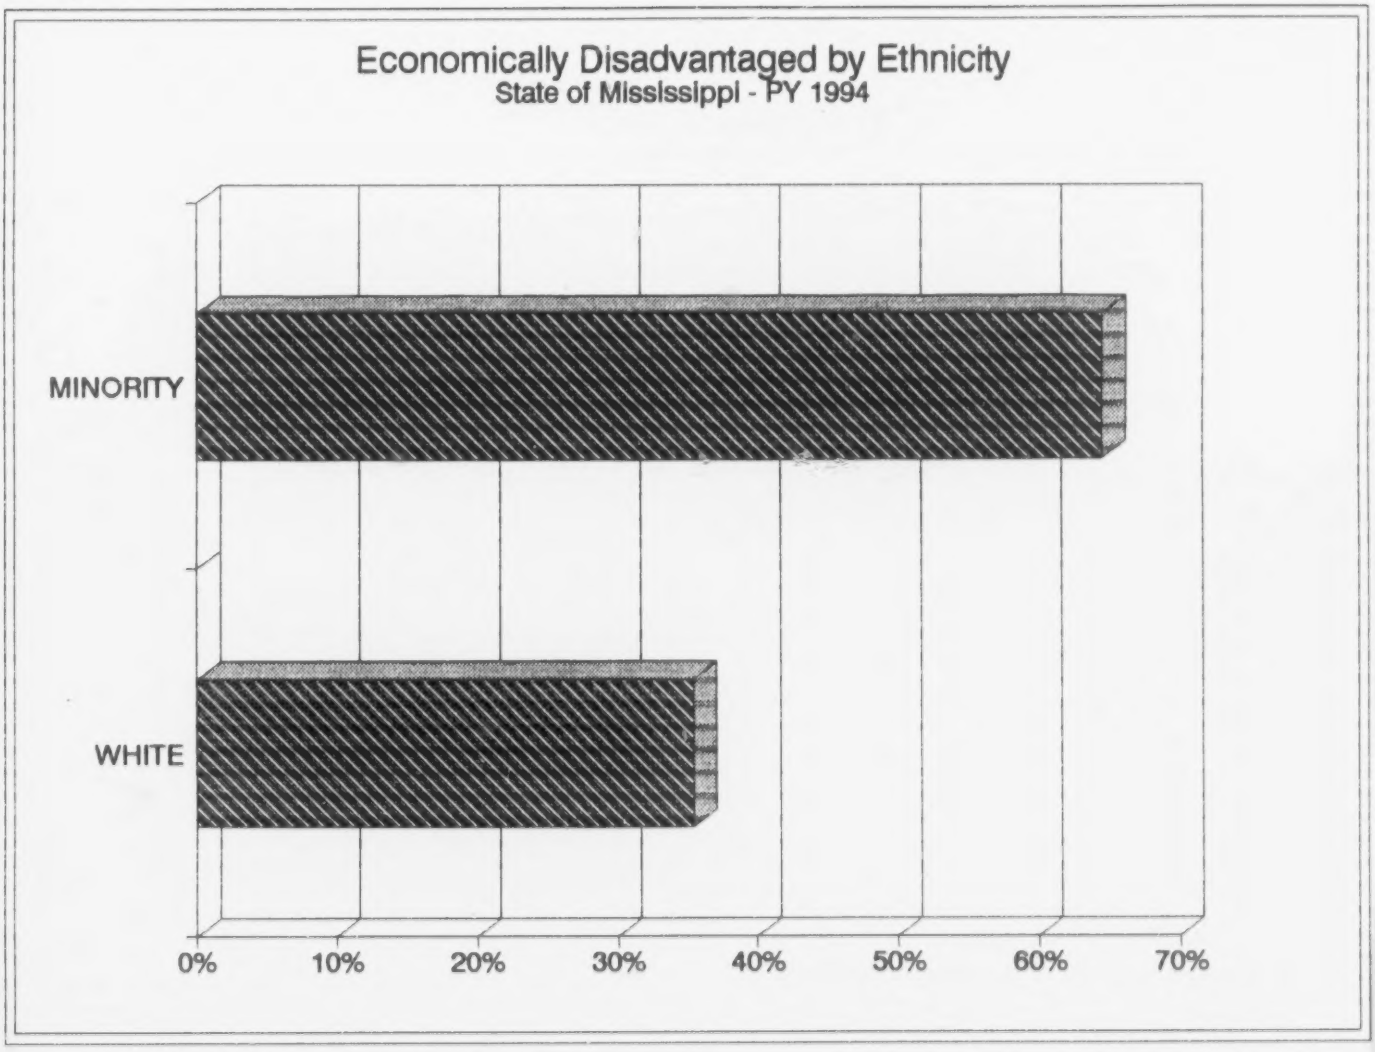
Characteristics of The JTPA Eligible Population

An estimated 746,370 Mississippians will exist on incomes below the poverty level in PY 1994. The majority (64.6 percent) of the state's poor in PY 1992 will be nonwhite. Over three-quarters of the children under 18 years of age who live in poverty will be nonwhite. As in the prior year, females will head 18.2 percent of all households, with approximately 56.4 percent of such families existing below poverty (Tables 2 & 30). Many of these women will not be able to secure work because of family responsibilities. A significant number of persons not related to a family will also live below the poverty level in PY 1994. Many of these people will not only be searching for work, but will bear the additional burden of trying to exist on a limited income while doing so.

Large numbers of the Mississippi populace will, as in past years, be existing on less than adequate incomes. Many of these people have grown to adulthood always existing in poverty. Some have had little or no exposure to the work ethic and are not oriented towards working steadily. These individuals need to be redirected towards helping themselves climb out of their impoverished state.

Figure 6



For detailed data, see Table 26.

Socioeconomic Characteristics

A study of certain social and economic surveys, conducted by the Bureau of Economic Analysis and the Bureau of the Census, provides an informative look at the state of Mississippi in relation to changes within the state, as well as comparisons to national trends.

The 1994 projections reveal that the Mississippi population will continue to increase at a nominal pace. The growth areas are located in metropolitan areas while those areas losing population are mostly of a rural nature.

National per capita income in 1990 stood at $18,696. Mississippi's per capita income stood at only 68.6 percent of the national level. Only three counties, Hinds, Lauderdale, and Desoto were even above 80 percent of the U.S. figure. Several counties were in the 70-80 percent range, while most counties fell in the 50-70 percent area. The lowest counties were Greene and Jefferson standing at 42.4 and 43.5 percent, respectively, of the national average.

Average weekly wages for workers covered under the Mississippi Unemployment Insurance Law revealed a great disparity of pay among the industrial groups within the state. The highest wages for 1994 should be found in the Petroleum industry group, while the lowest will be in Apparel. However, most industrial groups have shown sizable increases in wages over the last five years.

GLOSSARY OF TERMS AND ABBREVIATIONS

APPLICANT	A person who has registered with an Employment Service office for referal to suitable job openings.
CIVILIAN LABOR FORCE	The total of all employed and unemployed persons, 16 years of age and older, excluding military personnel.
CLAIMANT	A person who has filed for unemployment compensation through the Employment Security Commission.
COVERED EMPLOYMENT	Employment in establishments subject to make contributions, based on their payroll, to the Employment Security Commission.
DISADVANTAGED	Having income below the level of poverty as set by the U.S. Department of Health, Education and Welfare.
D.O.T. CODE	A code number from the DICTIONARY OF OCCUPATIONAL TITLES assigned to an occupation on the basis of functions performed.
EMPLOYED	Working for wages or other remuneration, or having a continuing job attachment.
ESTABLISHMENT BASED EMPLOYMENT	The number of employed persons computed by place of work within a specified geographic area.
HOUSING UNIT	A house, an apartment, a group of rooms, or a single room occupied as separate living quarters, or if vacant, intended for occupancy.
INSURED EMPLOYMENT	See COVERED EMPLOYMENT.
INSURED UNEMPLOYED	The total of all persons without jobs who are receiving unemployment compensation as a result of previous employment by a firm subject to make contributions to the state unemployment compensation fund.

METROPOLITAN STATISTICAL AREA	A term applied to counties or aggregations of counties which have one or more central core cities and meet specified criteria of population density, commuting patterns, and socioeconomic integration.
NONAGRICULTURAL WAGE AND SALARY EMPLOYMENT	The number of persons working for nonagricultural establishments during any part of the week which includes the 12th day of the month.
OCCUPATIONAL EMPLOYMENT STATISTICS	A program whereby employment by industry is used in conjunction with census staffing patterns and national changes to determine employment by occupation. A current employment survey is also used to update staffing patterns and project future needs.
PARTICIPATION RATE	The percentage of the population 16 years of age or older who are working or seeking work.
PLANNING YEAR	The period from July 1st of the numbered year through June 30th of the following year. For example, PY 1988 would run from July 1988 through June 1989.
RESIDENCE BASED EMPLOYMENT	The number of employed persons computed by place of residence within a specified geographic area.
SEASONALLY ADJUSTED	Adjusted statistically to remove seasonal patterns and/or fluctuations.
TRANSFER PAYMENT	Any payment by the government to an individual for which no work was performed. Included would be such things as pensions, unemployment benefits, welfare payments, educational assistance, and workmen's compensation.
UNEMPLOYED	Not working, or without a continuing job attachment, but actively seeking employment.
UNEMPLOYMENT COMPENSATION	Money payable to an individual with respect to his/her unemployment as

	covered under the Employment Security Law.
UNEMPLOYMENT INSURANCE	A program, administered by the state and financed by quarterly contributions from employers, whereby weekly benefits are paid to eligible individuals who are involuntarily unemployed.
UNEMPLOYMENT RATE	The percentage of the civilian labor force who are classified as unemployed.
VIETNAM ERA VETERAN	A veteran of U.S. military service who served more than 180 days on active duty any time between August, 1964 and May, 1975.
